

THE SCHOOL OF GLOBAL ENVIRONMENTAL SUSTAINABILITY
ANTARCTIC LECTURE SERIES PRESENTS...

WHAT'S WITH ALL THESE CRACKS?

TALES FROM ANTARCTIC ICE SHELVES

**DANIEL
MCGRATH**

Research Scientist,
Department of Geosciences,
Colorado State University

Ice shelves don't typically make headlines in The New York Times, but in recent months, stories of a nascent Delaware-sized iceberg and the evacuation of Halley Research Station due to rift growth have been prominent. Daniel McGrath will provide a synopsis of ice shelves, discussing their importance to the Antarctic Ice Sheet, along with details of these recent events. He will focus on Larsen C's rift and discuss efforts to both observe and model it, with an eye towards the stability of Larsen C in the future.
